A. Replication of the major arc: the single-stranded parental H-strand folds and brings the two arms of the common repeat together

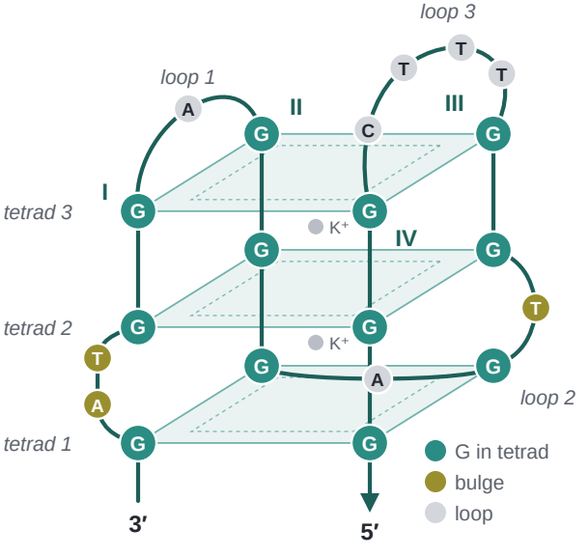

B. Common-deletion formation at nucleotide resolution (copy-choice recombination / strand slippage)

C. The proximal arm of the common repeat lies within a G-quadruplex on the H-strand (m.8468–8488)

pqsfinder: 21 bp, 3 tetrads, score 29 · D4a (m.8473T>C): 18 bp, score 50 · N1b (m.8472C>T): 14 bp, 2 tetrads, score 10
